

eServices For You

Program AutoWhite©

General

AutoWhite was designed with the premise that if you send many messages to joe@example.com, any message from joe@example.com is most likely not to be spam. The more e-mail you send to him, the less likely it will not be spam from him on a graduating basis.

Method

When you send a e-mail to someone, AutoWhite will add that e-mail address if not already recorded, and if recorded will add to the count it keeps of how many times you have sent to that e-mail address. Example, if you have sent joe@example.com 10 e-mails, it will have recorded 9. (First one is not counted as it is the original recording.)

As e-mail is received, AutoWhite checks its files to see if the from address is recorded. If so, it will return the number of times it has recorded that you sent a message to that address to Declude, which will then add a negative weight to the message according to that number and how you have set it up the test definitions. Using the above example, if you receive a message from joe@example.com, AutoWhite will return a code 9 to Declude, which according to the recommended configuration will add a negative weight of 5 to the message. If the return number is say 11, it would add a negative weight of 20 to the message.

Versions

Standard:

1. Basic function.
2. Only will process up to 2 Recipients. (Not configurable.)
3. Can not be used for Gateway service or S&F.

Pro:

1. Basic function.
2. Will process up to 5 Recipients. (Configurable.)
3. Will check the HOSTS file for Gateway service or S&F. (Should Imail add a registry for S&F domains, and that is incorporated into AutoWhite instead of using HOSTS file, that will be considered that same function albeit a new version.)

Enterprise: (Pending, target release: May 24, 2003.) (Will be an update of version 1.x)

1. Basic function.
2. Will process up to 5 Recipients.
3. Will check the HOSTS file. (Should Imail add a registry for S&F domains, and that is incorporated into AutoWhite instead of using HOSTS file, that will be considered that same function albeit a new version.)
4. 30 day allowance for a new user. (Triple the numeric value and return to Declude for the first 15 days, Double the numeric value and return to Declude for the remainder.)

Requirements

1. Imail Mail server (Tested with 7.15 on Windows 2000 Server.)
2. Declude JunkMail standard or better. Must be version 1.68i12 or better.

Limitations

1. Does not currently support processing of Local to Local e-mail. That may be changed in a future version.
2. Does not currently support message sent through web messaging. This is not a limitation of AutoWhite, but rather do to a limitation in Declude because of the design of Imail Web Messaging.

eServices For You

Program AutoWhite© (Continued)

Pricing

Standard license	\$75
Pro license	\$175
Enterprise license	\$TBD (Possibly \$300) (Target release is May 24, 2003.)

Education, 40% discount on license chosen. (Some limitations apply. Subject to qualification and verification.)

30 Day Demo. A demo of the PRO license whereby a license key is issued that will be good for 30 days.

License is perpetual.

Version updates free for life. (No new functions or function revisions. Bug fixes and such only.) (Example, version 1.0 to 1.4 is free.) Support for older versions only 3 months after availability of new version. (Example, version 2.0 comes out July 17, 2003; version 1.x is only supported through October 17, 2003.)

New version upgrades are 50% of new version cost. (Example, version 1.4 to 2.0.)

To upgrade to different license of the same version, a credit of 75% of the price paid for the original will be given if upgraded after 30 days. (Example, upgrade from Standard to PRO 60 days after purchase of Standard, upgrade price would be \$118.75 at current prices. If upgraded within 30 days of purchase, upgrade price would be \$100 at current prices.)

To upgrade to a different license of a newer version, a credit of 25% of the price paid for the original will be given. (Example, to upgrade from Standard 1.0 to Pro 2.0, upgrade price would be \$156.25 at current prices.)

Any one wishing to upgrade to Enterprise from PRO within 15 days of release of Enterprise will only pay the difference between the two.

Support

All support is done through e-mail. The e-mail address for support is support@eservicesforyou.com Please include in the subject line (AutoWhite).
